PRIP Manufacturer	Exchange venue specific to the future traded.
Website	Contact details specific to the exchange venue.
Telephone	Contact details specific to the exchange venue.
Competent Authority	Authority specific to the exchange venue.
Date	4 th October 2019

What is this product?

Type

Exchange Traded Derivative ("ETD") - Futures Contracts

Objective

A future contract is an exchange listed instrument that obligates the buyer to purchase an asset (or the seller to sell an asset) at a specified future date and price. Futures contracts may call for physical delivery of the underlying or may be settled in cash. As a holder of an open futures position you will be obligated to exchange the difference in price between the value of the contract at the time it was traded and the current market value until the expiration date of the contract. The difference to be exchanged is determined by the change in the reference price of the underlying and whether or not you are the buyer or the seller. Thus if the underlying rises in price, and you are long future, you will receive cash from the counterparty and vice versa. A future can be bought long or sold short to suit your view of the market direction of the underlying instrument.

A futures position is a leveraged product that requires you to deposit a small amount of cash as margin rather than paying the full value of the underlying. The level of leverage depends on the margin requirement for the individual futures contract. You will pay an initial margin upfront when the position is opened. Interactive Brokers establishes the minimum margin requirements based on historic volatility of the underlying and other factors.

Intended Retail Investor

This product is intended for investors who want to gain exposure to the underlying instrument and who understand that by holding a future position they receive exposure to the underlying on a leveraged basis and may lose more than originally invested.

Insurance Benefits

None

Term

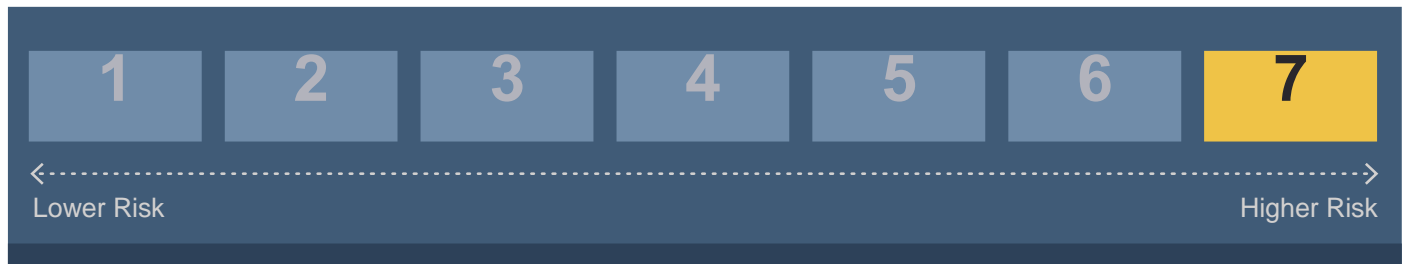

There is no predetermined investment holding period although the contract will expire according to its expiration date.

What are the risks and what could I get in return?

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the market.

Risk Indicator

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you. We have classified this product as 7 out of 7, which is the highest risk class. This rates the potential losses from future performance at a very high level in poor market conditions. **Be aware of currency risk. When you deal in a future that is denominated in a currency other than the base currency or a currency you have on a deposit in your account with us, all margins, profits, losses and financing credits and debits in relation to that future are calculated using the currency in which the future is denominated. This risk is not considered in the indicator shown above.**

In some circumstances, if your account does not contain enough equity to meet applicable margin requirements your open positions will be liquidated. **The total loss you may incur may significantly exceed the amount invested.** You may not be able to close your position easily or you may have to sell at a price that significantly impacts your realized profit/loss. Markets may fall overnight and we may not be able to close out your position at a price that would avoid losses greater than the margin originally deposited. This product does not include any protection from future market performance so you could lose more than you have invested. If IBUK is not able to pay you what is owed, you could lose your entire investment.

Performance Scenarios

Long Futures Payoff Graph

This graph illustrates how your long futures investment could perform. You can compare it to the pay-off graphs of other derivatives. The graph presented gives a range of possible outcomes and is not an exact indication of what you might get back. What you get will vary depending on how the underlying will develop. For each value of the underlying, the graph shows what the profit or loss of the product would be. The horizontal axis shows the various possible prices of the underlying value on the expiry date and the vertical axis shows the profit and loss. Buying this product holds that you think the underlying price will increase.

The maximum loss is unlimited. In the event of unfavourable movement in the underlying that exceeds your ability to fund the resulting margin requirement you may be forced to close this and other positions held in your trading account.

What happens if the PRIIP Manufacturer is unable to pay out?

The PRIIP Manufacturer for an Exchange Traded Derivative is the exchange itself or an associated clearinghouse which acts as guarantor for the contracts it issues. Client funds held by IBUK are segregated from its own money as required by the UK FCA Client Assets rules. If IBUK was unable to pay out, retail investors and certain other investors may be eligible for compensation from the Financial Services Compensation Scheme up to GBP 50,000 but may otherwise lose all of their initial investment and any returns generated on their initial investment.

What are the costs?

The Reduction in Yield (RIY) shows what impact the total costs you pay will have on the investment return you might get. The total costs take into account one-off, ongoing and incidental costs. The amounts shown here are cumulative costs of the product itself, over the recommended holding period. They include potential early exit penalties. The figures assume you invest \$1,000. The figures are estimates and may change in the future.

Costs Over Time

The person selling you or advising you about this product may charge you other costs. If so, this person will provide you with information about these costs, and show you the impact that all costs will have on your investment over time.

Estimated Holding Period	An exchange traded derivative can be held unto the specified contract expiration date.
Investment	Margin requirement specific to the futures contract.
Notional Amount	Specific to the futures contract.
Total Costs	Specific to the futures contract.
Impact on Return	Specific to the futures contract.

Composition of Costs

The table below shows:

- The impact each year of the different types of costs.
- What the different cost categories mean.

This table shows the impact on return per year			
One-off costs	Entry costs	USD 1.05 – 10.00 per contract	Brokerage Commissions. This is the most you will pay, and you could pay less.
	Exit costs	USD 1.05 – 10.00 per contract	Brokerage Commissions. This is the most you will pay, and you could pay less.
Ongoing costs	Portfolio Transaction costs	0%	Not Applicable
	Other on-going costs	0%	Not Applicable
Incidental costs	Performance fees	0%	Not Applicable
	Carried interest	0%	Not Applicable

How long should I hold it and can I take money out early?

Recommended (required minimum) holding period: None

There is no recommended holding period or minimum holding period. There are no consequences of you choosing to close your position other than ending your exposure to the underlying at that time. The contract will expire on the expiration date specified in that futures contract.

How can I complain?

Complaints about the product, the conduct of *PRIIP Manufacturer* should be addressed to Interactive Brokers (U.K.) Limited, Heron Tower, 110 Bishopsgate (Level 20), EC2N 4AY London (complianceuk@interactivebrokers.com). Web link; <http://www.interactivebrokers.co.uk/ukcomplaints>.
